DETAILED ACTION

This action is in response to Applicant's amendment filed on 06/02/2010.

Independent claims 15 and 20 and dependent claims 16, 19, 21-25 and 27 have been amended. Dependent claims 17 and 18 have been cancelled. Claims 15, 16 and 19-29 are now pending in the present application. Claims 15, 16 and 19-29 are allowable.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview and subsequent e-mail message sent on 07/27/2010 (10:28 A.M. EST) by Mr. Randolph E. Digges III, registration number 40,590.

PROPOSED EXAMINER'S AMENDMENT

Claims 15 and 20 would be amended as follows:

Claim 15 (currently amended): A method for establishing a connection between a virtual electronic teaching system having a central content-server for an e-learning or tele-teaching event and a workstation of a person participating in the e-learning or

tele-teaching event utilizing a telecommunication network having a main distribution connected to an exchange with an access multiplexer or a splitter connected to or integrated in the main distribution and an analog or digital telecommunication device, the method comprising:

connecting an interface circuit to the telecommunication device or to the workstation, the interface circuit including a memory unit and a microprocessor;

registering the interface circuit to the content-server by means of a log-in procedure stored in the memory unit, the interface circuit registering vicariously for the telecommunications device;

establishing a connection between the interface circuit and the content-server vicarious for the telecommunication device connected to said main distribution;

determining a type of connection pending on the communications interface of the interface circuit;

transmitting at least one stored test signal from the memory unit of the interface circuit to the content-server;

evaluating an acknowledgement received by the interface circuit from the content-server in response to the test signal;

testing at least a bandwidth available to the telecommunication device using the interface circuit;

testing all available protocols in communication with said content-server using the interface circuit;

adjusting the interface circuit to a protocol proposed by the content-server; and

preventing "time out"-problems by emitting a message from the interface circuit confirming the complete reception of an image file from the content-server such that said workstation remains connected to said e-learning or tele-teaching event including during periods when broadband transmission is not possible.

Claim 20 (currently amended): A virtual electronic teaching system comprising:
a central content-server for an e-learning or tele-teaching event;
a workstation of a person participating in the e-learning or tele-teaching event;
a telecommunication network connected to said content-server, the telecommunication network including a main distribution connected to an exchange and an access multiplexer or a splitter connected to or integrated in the main distribution;
an analog or digital telecommunication device; and
an interface circuit connected to the telecommunication device, the interface circuit having a memory unit and a microprocessor;
wherein a first end of said interface circuit is connected to the main distribution and a second end of said interface circuit is connected to said workstation, and
wherein the interface circuit is connected via at least a standardized interface vicarious for said telecommunication device and registers itself to said content-server by means of a log-in procedure stored in the memory unit, and automatically tests at least a bandwidth available to the telecommunication device and all available protocols in communication with said content-server as a remote station and adjusts itself to a protocol proposed by said remote station by transmitting at least one test signal stored

in the memory unit to said content-server so that said interface circuit prevents "time out" problems by indicating the complete reception of an image file such that said workstation remains connected to said e-learning or tele-teaching event including during periods when broadband transmission is not possible.

Allowable Subject Matter

Amended independent claims 15 and 20 are allowable. The following is a statement of reasons for the indication of allowable subject matter:

Consider method **claim 15**. None of the prior art of the record teaches or fairly suggests all of the claimed limitation of the invention. The best prior art found during the examination of the present application, **Murray et al. (U.S. Patent Publication # 6,356,943)** in view of **Redfern (US Patent Publication # 7,313,130 B2)** and further in view of **Lawrence (US Patent Publication # 6,825,196 B1)** and further in view of **Kukic (US Patent Application Publication # 2003/0169780 A1)** and further in view of **Kloninger et al. (US Patent Application Publication # 2004/0073596 A1)** and further in view of **Hughes et al. (US Patent Publication # 6,434,612 B1)** and further in view of **Moutafov (US Patent Application Publication # 2003/0225889 A1)** fail to specifically disclose the limitation of 'testing all available protocols in communication with the content server, adjusting the interface circuit to a protocol proposed by the content server, and preventing "time out" problems by emitting a message from the interface circuit confirming the complete reception of an image file from the content server such

that the receiving workstation remains connected to the e-learning or tele-teaching event including during periods when broadband transmission is not possible.'

Since all the features of **claim 15** are not disclosed by any of the best available prior art, either alone or in any combination, the examiner considers **claim 15 to be novel and non-obvious and therefore allowable.**

Dependent claims 16 and 19 are also allowable because they inherit all the features of the allowable base claim 15 and include additional limitations of their own.

Independent system claim 20 also recites the same features that makes claim 15 allowable, and is therefore allowable for the same reasons listed above for claim 15.

Dependent claims 21-29 inherit all the features of the allowable base claim 20 and include additional limitations of their own. They are, therefore, also considered allowable.
